

Where the Conversion Leaks Are

nomadinternet.com · CRO Recommendations · August 2026

The most valuable conversion mechanism on this site is the coverage-check form, which is the primary entry point for users to determine if the service is available at their address. This mechanism is bleeding value because the homepage presents multiple competing CTAs that dilute focus, and the /pricing page fails to render, breaking the path for users seeking plan details. Additionally, the lack of clear plan context and security trust markers around the form increases friction and reduces trust, causing users to abandon before completing the coverage check.

9	Missing security trust markers No visible security badges, encryption mentions, or trust seals appear where users enter address and payment...	High	Medium	4/10
10	Vague guarantee signal A confidence-related heading exists but offers no explicit terms, making the promise unconvincing at the...	Medium	Low	4/10

How to read this

Findings marked **verified** were measured directly and are reproducible. Everything else is a hypothesis derived from inspecting the live pages, which is why the PXL evidence questions score zero for those items. Sized opportunities describe the prize if a change works, not expected revenue: roughly 10–30% of A/B tests produce a significant win, and winners tend to overstate their true effect.
